FLOORING

Luxury Performance Tiles

A new star is born

Stone Polymer Composite tiles are a revolution in flooring, thanks to its innovative Click-N-Lock Technology. It enables the tiles to be laid with minimal effort and expertise. Aesthetically appealing in both wood and stone finish, they are highly durable.

Luxury Performance Tiles is an upgrade over Luxury Vinyl Tiles flooring.

The main ingredient in our LPT tiles is its Stone Polymer composite core. This composition of stone infused with polymer molecules, act as a binding agent, giving us best in class strength and makes the tiles water proof and UV resistant.

In addition, the presence of polymer makes the limestone mouldable enabling us to put the locking system right at the manufacturing stage. This means we are able to make thinner tiles while maintaining the strength and durability of the locking mechanism. This makes our LPT tiles lighter by weight, thereby reducing the construction and transportation costs.

The lack of any organic material makes our products anti-microbial and termite proof. Also, every one of our LPT products are made of 15% recyclable material which makes our tiles more sustainable than existing products in the market.

Benefits of LPT

Glue Free

Quick
Installation

Mix & Match
