

INTRODUCING the new multi level SUMMIT cladding panels by Alfresco is the future of sustainable timber facades. They are a combination of ground breaking sustainable design & state of the art production.

Produced in India by Himalaya Global in the advanced 1,00,000 Sq ft production plant, Amer panels are our new variation in the already popular and market leading Cascade Panels. Summit is made of 60% natural timber and 40% recycled polymer. The panel's construction is a wood plastic composite (WPC) core encased by a hybrid high performance polymer capping.

The Summit panels are designed to look like natural timber but need zero maintenance.
